3. Composition / Information on Ingredients	
Warnings:	For <i>in vitro</i> diagnostic use only. Do not pipette by mouth. Handle laboratory reagents in accordance with Good Laboratory Practice. May cause irritation to skin and eyes, may be irritating to mucous membranes and upper respiratory tract. Avoid contact with skin, avoid inhalation and ingestion. All components contain Sodium Azide. Sodium azide reacts with lead or copper plumbing to form potentially explosive azides. When disposing of such reagents flush with large volumes of water to prevent azide build up. Exposed metal surfaces should be cleaned with 10% sodium hydroxide. The Latex Reagent and Positive control contain material of human origin. Each donor used in the preparation of the materials was tested by an FDA approved method for the presence of HIV and HCV antibodies, and the hepatitis B antigen, and found to be non-reactive. However, since no test can offer complete assurance that such infectious agents are absent, reagents should be handled with the same care as a clinical specimen.
