RANDOX

RX daytona⁺

A fully automated clinical chemistry analyser with unrivalled performance

RX series

Precision. Reliability. Accuracy

The RX daytona+ is a bench-top, fully automated, random access clinical chemistry analyser capable of performing routine & specialised testing and emergency STAT sampling. The most versatile analyser in its class, the RX daytona+ combines robust hardware and intuitive software with the world leading RX series test menu for unrivalled performance.

Reagent Carousel

- Reagents cooling 8-15 °C
- 50 cooled positions for 20ml & 70ml bottles
- Automatic barcode for reagent identification

Cuvettes

- 72 reaction cuvettes (semi-permanent)
- Cuvettes life-span: 3 – 6 Months
- Minimum reaction volume of 100µl
- Maximum reaction volume of 350µl

System Overview

The RX daytona+ provides high quality testing on a compact, easy to use clinical chemistry analyser for accurate results you can trust.

Wash Station

- 12 stage washing process
- Includes acid, alkali and pure water wash steps
- Stations 1-4 have liquid level sensors to prevent cuvette overflows

Sample Carousel

- Universal carousel with 40 positions
- Sample interruption for addition of emergency samples
- Barcode sample identification
- Dead Volume 150µl in standard or primary tubes - 100µl in paediatric cups

RX series

Precision. Reliability. Accuracy.

- Fully automated chemistry analyser
- 270 photometric tests per hour and up to 450 including ISE
- Reagent carousel with 50 cooled positions
- Universal sample carousel with 40 positions and 10 control/calibrator positions
- Low water consumption of just 5 litres per hour
- Intuitive icon based user friendly software (Windows®)
- Dual 5 speed stirrers optimised for each assay ensuring better performance
- Storage of up to 30,000 patient reports with search facility
- Liquid level, clot & crash detection
- Unique emergency loading port allows emergency samples to be analysed quickly and easily during run
- Low pipetting capabilities: reagent volume R1: 20 - 250µl (1µl increments) R2: 20 - 180µl (1µl increments) & sample volume of just 1.5µl - 35 µl (0.1µl increments)
- Barcode readers for both sample and reagent identification

RX series

Precision. Reliability. Accuracy

Benefits at a glance

Highly Accurate Testing

- Separate sample and reagent pipettes minimise carryover
- Dedicated micropipettes are equipped with liquid level sensors and crash detection
- Dual five speed stirrers optimise mixing for each assay
- Serum indices detect lipaemic, icteric and haemolytic samples, building confidence in results and reducing the need for expensive repeats

Ease of Use

- Easy to use Windows® based software
- Just one click opens the emergency sample ordering screen for rapid STAT testing
- Barcode readers for both sample and reagent identification
- Symbol based software for ease of use

Superior Performance

- Sensitive clot detection sensor detects clots such as fibrin at the sample pipette
- 72 cuvettes onboard with cuvette check function ensuring only clean and viable reaction vessels are reused
- Built in inventory management system automatically calculates remaining reagent volume and the number of tests available

Optimum Laboratory Efficiency

- Low minimum reaction volume of 100µl improves cost-effectiveness and reduces waste
- Automatic test re-run function saves time and reduces risk of human error
- Automatic sample dilution
- Automatic wake up and sleep functionality

Time and Cost Savings

- Minimal maintenance required
- Extensive menu allows consolidation of testing
- Economic platform with low water consumption of only 5 litres per hour

Unrivalled QC Capabilities

- Generation of Levey-Jennings charts, calibration curves and QC statistics for reliable results
- View QC history

Flexibility

- 12 wavelengths generated via diffraction grating: 340, 380, 415, 450, 510, 546, 570, 600, 660, 700, 750 and 800nm
- Capable of running monochromatic, bi-chromatic, endpoint, kinetic, ISE, and reagent blanking assays
- 7 different calibration options available including: Factor; Linear; Point to point, Log-logit, Exponential, Spline and Spline 2

Extensive Dedicated Test Menu

- Largest range of tests available from a sole supplier, including routine and unique assays optimised for superior performance.
- Ability to run specific proteins removes the need for a separate nephelometry system

Total SO ₂

BIOTECHNOLOGY:

Glutamate
Glutamine

SPECIALITY:

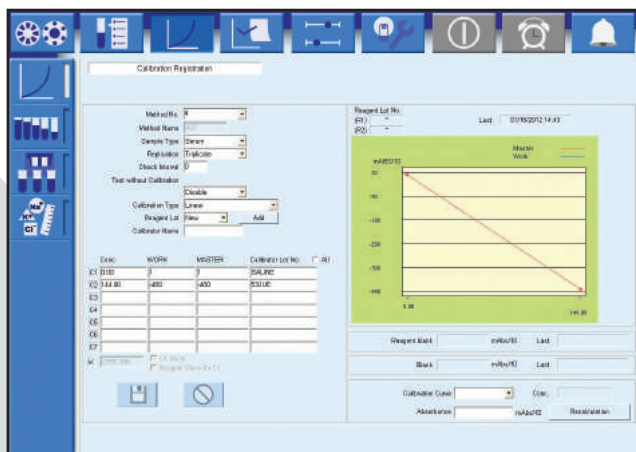

Acid phosphatase

RX series

Precision. Reliability. Accuracy.

The symbol based intuitive software allows easy access to information and control of operations from the main screen with informative tabs

Calibration Screen

Calibration Screen

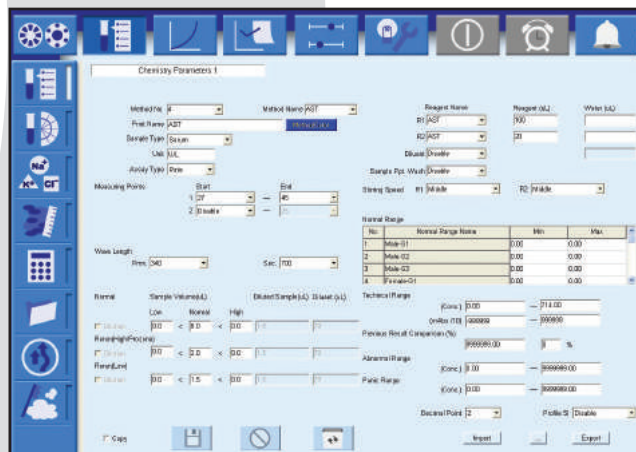

- Sets calibrator serial dilution and displays multipoint calibration curves

Quality Control

- Generation of Levey-Jennings charts, calibration curves

Run Monitor

- Displays full patient demographics
- View status in real time including time to completion
- Indicates number of tests remaining

Parameter Screen

Chemistry Parameters

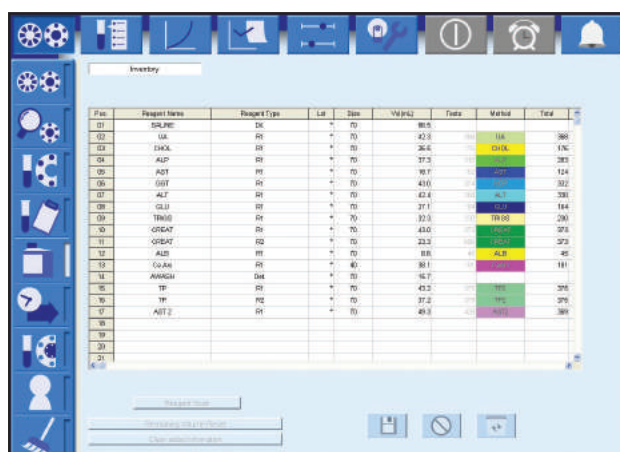

- Enables sample dilution and test re-runs
- Set up to 20 test profiles and define order of analysis

Connectivity

- Software capable of connecting to LIMS system via ASTM standard

Easy to Follow Reports

- View real time results status, including time to completion

Inventory Screen

Inventory

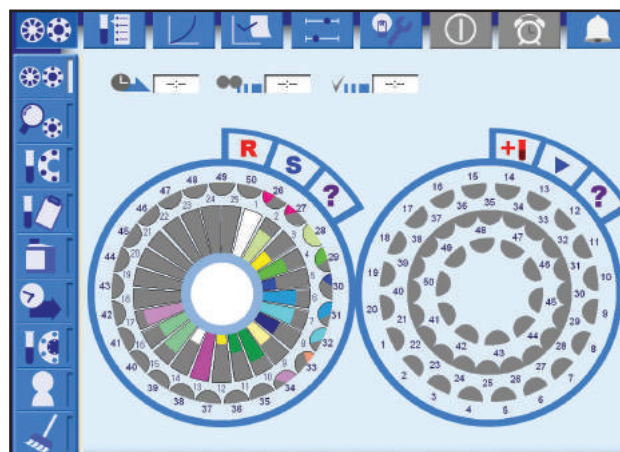

- Automatically calculates remaining reagent volume and the number of tests available and stability

Maintenance

- 5 minutes minimal daily maintenance required

Results

- Download and print results
- Send to host automatically

Run Monitor Screen

User - Friendly Interface

- Familiar Microsoft Windows® based software offers ease of navigation
- Intuitive symbol based software results in minimal training requirements and enhanced productivity

Specifications

PHYSICAL DIMENSION

Height	625mm
Depth	670mm
Width	870mm
Weight	120kg

PERFORMANCE CHARACTERISTICS

Throughput	270 tests per hour, 450 tests per hour with ISE
Analyser type	Compact fully automated random access bench top clinical analyser
Assay tests	Monochromatic, bi-chromatic, endpoint, kinetic, sample and reagent blanking and ISE
Maintenance	Daily maintenance-less than 5 minutes. No rear access required. Simple twice yearly preventative maintenance service.

REAGENT & SAMPLE SYSTEM

Data management	Storage of up to 30,000 patient reports, search facility
Test channels	50 photometric channels, 3 direct ISE
Sleep mode	User defined sleep mode capabilities with automatic wash and instrument prep
Reagent pipette	Dedicated reagent micropipette with liquid level sensor and crash detection
Reagent volume	R1: 20 to 250µl (1µl increments) R2: 20 to 180µl (1µl increments)
Reagent capacity	Removable turntable with 50 cooled positions for 20ml and 70ml bottles
Reagent cooling	8 to 15°C
Reagent identification	Barcode reagent identification
Reagent inventory	Calculation of remaining reagent volume and tests available. Alert for shortage, expired
Sample addition	Sampling interruption for addition of samples
Sample capacity	Removable turntable with 40 positions for samples, calibrators and controls
Sample dead volume	150µl in standard or primary tubes. 100µl in paediatric cups
Sample dilution	Pre-dilution and automatic re-assay with diluted, reduced or increased sample volume
Sample identification	Barcode sample identification
Sample pipette	Dedicated sample micropipette with liquid level sensor, crash protection and clot detection
Sample tube size	Multiple primary tube sizes (diameter 12 to 16mm, height 55 to 100mm), Paediatric cups
Sample type	Serum, plasma, urine & supernatants
Sample volume	1.5 to 35µl (0.1µl increments)
STAT sampling	STAT samples can be added immediately via emergency loading port

REACTION SYSTEM

Reaction time	10 minutes (R1: 5 min. + R2: 5 min.)
Reaction volume	100 to 350µl
Stirring speed	5 speed levels available
Stirring system	Dual 5 speed stick type rotating stirrers
Temperature control	Dry bath
Water consumption	Maximum 5 litres per hour

Water requirements	NCCLS type 1 or 2 purified water supply
Wash unit	12 stage washing process
Cuvettes	72 semi-permanent cuvettes
Incubator temperature	37°C ± 0.1°C
Cycle time	13 seconds

OPTICAL SYSTEM

Detector method	Direct absorbance in cuvette (bi-chromatic and monochromatic)
Detection principal	12 wavelengths generated via diffraction grating: 340, 380, 415, 450, 510, 546, 570, 600, 660, 700, 750 and 800nm
ISE unit	Optional ISE unit available
Light source	Halogen tungsten lamp air cooled by fan

CALIBRATION & QC

Quality control	Interactive Levey Jennings charts, daily, monthly and batch QC with data archiving.
Calibration principal	Factor, Linear, Point to point, Log-logit, Exponential, Spline and Spline 2

POWER & CONNECTIVITY

Power requirement	AC100V to 120V, 6.5A (Max.) AC200 to 230V, 3.3A (Max.) 50/60Hz
Power consumption	650VA
Permissible voltage variation	± 10% (Max.)
LIMS connectivity	Bi-directional ASTM Standard (RS232 connection)

OPERATING SYSTEM

Operator interface	Windows® based software

The RX series has been developed by Randox to meet the growing needs of clinical laboratory testing. Robust hardware combined with intuitive software ensures exceptionally low downtime with unrivalled precision and accuracy for results you can trust.

RX altona

A semi-automated clinical chemistry analyser with increased auto functionality

The RX altona has been developed with the user in mind by incorporating a responsive touch-screen display. The sleek ergonomic design boasts intuitive user-friendly software allowing for test menu personalisation for ease of use. The RX altona provides exciting opportunities for consolidation of routine & specialised testing and is perfectly suited to a variety of laboratory types as a primary or a backup analyser.

RX monaco

A fully automated clinical chemistry analyser with unrivalled performance

Capable of carrying out 170 tests per hour, the RX monaco guarantees unrivalled performance, providing cost-effective, high quality testing for small to mid-volume laboratories. This fully automated analyser can be easily integrated into any laboratory setting with the option of a floor standing unit if benchtop space is limited.

RX daytona+

Rapid, comprehensive clinical chemistry testing on a superior fully automated analyser

The RX daytona+ is a fully automated, random access, bench top clinical chemistry analyser capable of performing routine and specialised testing as well as emergency STAT sampling. With a throughput of 450 tests per hour including ISE, the RX daytona+ offers a high performance, fully automated solution to mid-volume clinical chemistry testing. With intuitive icon-based software, the RX daytona+ is the only analyser in its class with a sample clot detection sensor ensuring efficiency, precision and accuracy.

RX imola

A compact fully automated solution for high quality clinical chemistry testing

The RX imola combines superior quality, intuitive software and minimal maintenance for increased productivity and reduced downtime for rapid comprehensive testing. This compact, fully automated benchtop analyser is capable of handling the workload of a medium to high throughput laboratory, with a throughput of 560 tests per hour including ISE.

RX modena

A high volume, floor standing, fully automated clinical chemistry analyser that promises to revolutionise your laboratory

Capable of running up to 1,200 tests per hour, with unique HbA1c testing abilities, the RX modena consolidates all your assay requirements onto one intuitive platform. This high throughput analyser has a continuous loading hatch allowing emergency samples to be analysed quickly and easily during run. The RX modena boasts icon based, interactive touch-screen technology adding a modern flair to your laboratory.
