

Integrin-linked kinase (ILK1)	Human, Recombinant, <i>E. coli</i>		
Cat. No.:	RCP9198	Size:	10µg
	RCP9199		100µg
	RCP9299		1000µg

Synonym: ILK-1, ILK-2, 59 kDa serine/threonine-protein kinase, p59, p59ILK.

Description: Integrin-linked kinase (ILK1) is a serine/threonine protein kinase, containing 4 ankyrin-like repeats. ILK1 interacts with the cytoplasmic domains of integrin β1 and β3 subunits as well as several adaptors and signalling proteins and acts as a proximal receptor kinase regulating integrin-mediated signal transduction. ILK1 has been reported to regulate a number of biological properties including anchorage-independent cell cycle progression, tumour cell invasion and apoptosis. Over-expression of ILK1 has been documented in a wide variety of human malignancies.

RANDOX recombinant ILK1 comprises a 452 amino acid fragment (1-452) corresponding to the mature ILK1 full-length protein and is expressed in *E. coli* with an amino-terminal hexahistidine tag. This product is for research use only and is not intended for diagnostic or therapeutic use.

Form: Liquid

Purity: >95% by SDS-PAGE
