Anti-CD3 epsilon (CD3e) Recombinant Antibody Fragments

Target: Anti-CD3 epsilon (CD3e)

Clone Name: 26.7C4

Catalogue Number: RAF9731

Description: Recombinant single domain antibody fragments (sdAb) obtained from Alpaca and expressed in an E. Coli to bind against CD3 epsilon (CD3e) antigen.

Activity/ Specificity: Tested positive against CD3e antigen. Cross-reactivity checked against a panel of known cross-reactants and non-specific antigens.

Applications: These fragments contain His and c-Myc fusion tags which may be used for detection or immobilisation. Recombinant antibody fragments are suitable for use in ELISA immunoassays, biosensor applications, western blots, immunohistochemistry, flow cytometry, immunoaffinity purification and most other immunological methods*.

Size: Approximately 18 kDa

Quantity: 1 mg

Concentration: Typically >1mg/ml

Purity: >90% assessed by SDS-PAGE.

Storage: These fragments are stable at 4°C. It is recommended that for storage over extended periods they are kept at −20°C and should not be subject to repeated freeze-thaw cycles.

Buffer: 1x PBS containing 0.09% sodium azide preservative.

To be determined by end-user.

* This product as supplied is intended for research applications only. It is not for use in therapeutic or diagnostic applications without the expressed written authorization of Randox Life Sciences.
