
TGF beta 1

Human, Recombinant, *E. coli*

Cat. No.: RCP9394

Size: 10µg

Synonym: Transforming growth factor beta-1; TGFβ-1; TGFβ; TGF beta 1; TGF-b1

Description: TGF beta 1 is a member of the larger TGF beta superfamily of cytokines produced by a wide variety of cells that are involved in the regulation of cell proliferation, differentiation, apoptosis, cellular homeostasis and a wide variety of other cellular functions. TGF beta 1 has been shown to regulate the actions of many other growth factors involved in a range of human diseases including renal disease, hepatic disease, heart failure and cardiomyopathies

RANDOX recombinant TGFβ-1 comprises a 112 amino acid fragment (279-390) corresponding to the mature TGF-beta protein sequence and is expressed in *E. coli* with an amino-terminal hexahistidine tag. This product is for research use only and is not intended for diagnostic or therapeutic use.

Form: Liquid.

Supplied in 1x Laemmli Buffer (25mM Tris-HCl pH6.8, 50mM DTT, 1% (w/v) SDS, 0.1% (w/v) Bromophenol Blue, 2.5% Glycerol).

Purity: Single band on Western blot.
