

**MIF**

**Human, Recombinant, *E. coli***

<b>Cat. No.:</b> RCP9443	<b>Size:</b> 10µg
RCP9444	100µg
RCP9445	1000µg

**Synonym:** Macrophage Migration Inhibitory Factor; MMIF; Phenylpyruvate tautomerase; Glycosylation-Inhibiting Factor; GIF

**Description:** MIF is involved in cell-mediated immunity, immunoregulation, and inflammation. Reportedly, it also plays a role in the regulation of macrophage function in host defense through the suppression of anti-inflammatory effects of glucocorticoids. This lymphokine and the JAB1 protein form a complex in the cytosol near the peripheral plasma membrane, which may possibly indicate a role in integrin signalling pathways. However, the biological mechanism and significance of MIF remains unknown.

**RANDOX** recombinant MIF comprises a 114 amino acid fragment (2-115) corresponding to the mature MIF protein and is expressed in *E. coli* with an amino-terminal hexahistidine tag. This product is for research use only and is not intended for diagnostic or therapeutic use.

**Form:** Liquid

**Purity:** >95% by SDS-PAGE
